College of
Applied Studies**

BCAS
CAMPUS

This course is designed to meet the demand of Psychology in the ever changing world. There is a tremendous potential for psychology in all spheres of human life - education, religion, philosophy, health, business, food, culture, politics and what not. It helps you aim a prestigious career as a Psychologist in whatever field you choose.

Psychology is the art of studying the human mind and behaviour. Analyzing what makes people indicate and how they express themselves is a complex science. Basically applications of psychology include perception, cognition, phenomenology, motivation, brain functioning, personality, behaviour, ergonomics, performance enhancement and interpersonal relationship. The quote below by an academic tells the importance of psychology in a nutshell.

"The difference between optimism and pessimism resides in memory. The pessimist aptly recalls the hurts and failures of yesterday, but cannot remember the plentiful possibilities of a new tomorrow. The optimist has a hopeful future already memorized" - Charles E. Jinks
